

3/13/17

**The following are guidelines necessary to receive a free underground secondary/service offered by Natchez Trace Electric Power Association.**

**The interested builder must do the following:**

**1. Contact the appropriate NTEPA representative prior to any construction above the slab or above the lowest conventional floor. If the footing extends past the brick ledge, the customer shall provide a notch in the footing. The notch width depends on the type of meter base and the depth of the footing.**

**2. Verify that the new home is all-electric. (Included with the exceptions below):**

**The new home may be equipped with "one" set of gas logs or "one" infrared gas heater (not both in one dwelling) for emergency purposes and also use a duel fuel heat pump or geo-thermal unit if desired. The new home can also have a gas cooktop and /or a duel fuel stove.**

**3. Verify that a heat pump will be installed for the primary HVAC.**

**4. The new home must have an electric water heater to be eligible to participate in the new homes program.**

**\*\*\* A new electric hot water heater or an electric replacement will qualify for a \$50 bill credit. \*\*\***
